1. Interface Overview

OxyOne's interface brings together the configuration commands, calculation indicators, and tools needed to explore the refrigeration installation.

Element	Role
Configuration menus	Select the type of foodstuffs or stored products and the number of cold rooms.
Thermal and dimensional indicators	Display the thermal parameters as well as the dimensional metrics calculated by the application.
3D simulation scene	Visualize the modeling of the refrigeration installation.
Navigation controls	Rotate the 3D model and reset the view.
Demo and contact links	Access the video demonstration, the Upwork services catalog, and WhatsApp contact.

Tip

First locate the configuration menus and indicators: they allow you to track the choices made and their effects on the displayed metrics.

2. How to Use

Step 1 — Choose the type of foodstuffs or stored products

1. Open the first dropdown menu and select the type of stored products: **Red Meat**, **White Meat**, **Fruits & Vegetables**, **Dairy Products**, **Fish** or **Frozen Products**.

Effect

The application automatically adjusts the recommended setpoint temperature ranges according to the selected product type. The examples provided indicate 4 °C for fruits and vegetables and −18 °C for frozen products.

Step 2 — Configure the number of cold rooms

1. Open the second dropdown menu and select the desired number of cold rooms, from **1 to 10 rooms**.

>
> The **Total Global Volume** and the **Wall Surface Area (Unit)** are recalculated in real time to provide the basic metrics.

Step 3 — Navigate the 3D scene

1. Use the controls located at the bottom of the screen: ▲, ◀, ▶, ▼ and **RESET**.

These controls allow you to rotate the 3D model, inspect the refrigeration installation, and reset the view.

Step 4 — Use the features and resources

1. Select the link 🎬 **WATCH OUR VIDEO DEMO** to see the tool in action.
2. Use the direct links to the **Upwork services catalog** and **WhatsApp contact** for any request for customization or a Premium version.
3. Review the information about the author: the solution details, its labeling by the Ministry of Economy, and the development profile.
